2520080063 - CIAS SKILL 1

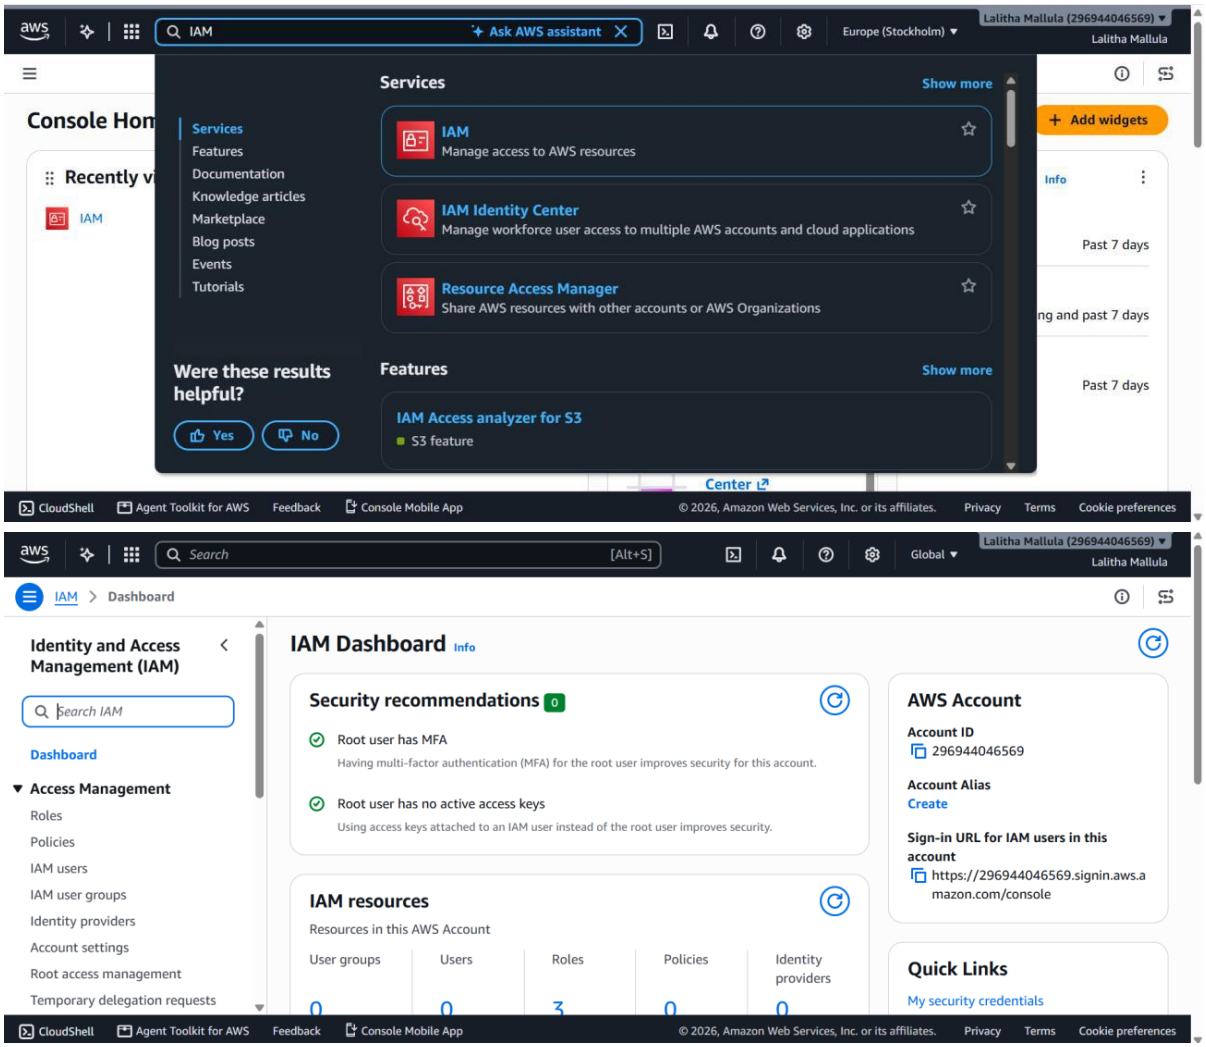

Creation of IAM User

Aim

To create an IAM user in the AWS Management Console and attach the required permissions policy.

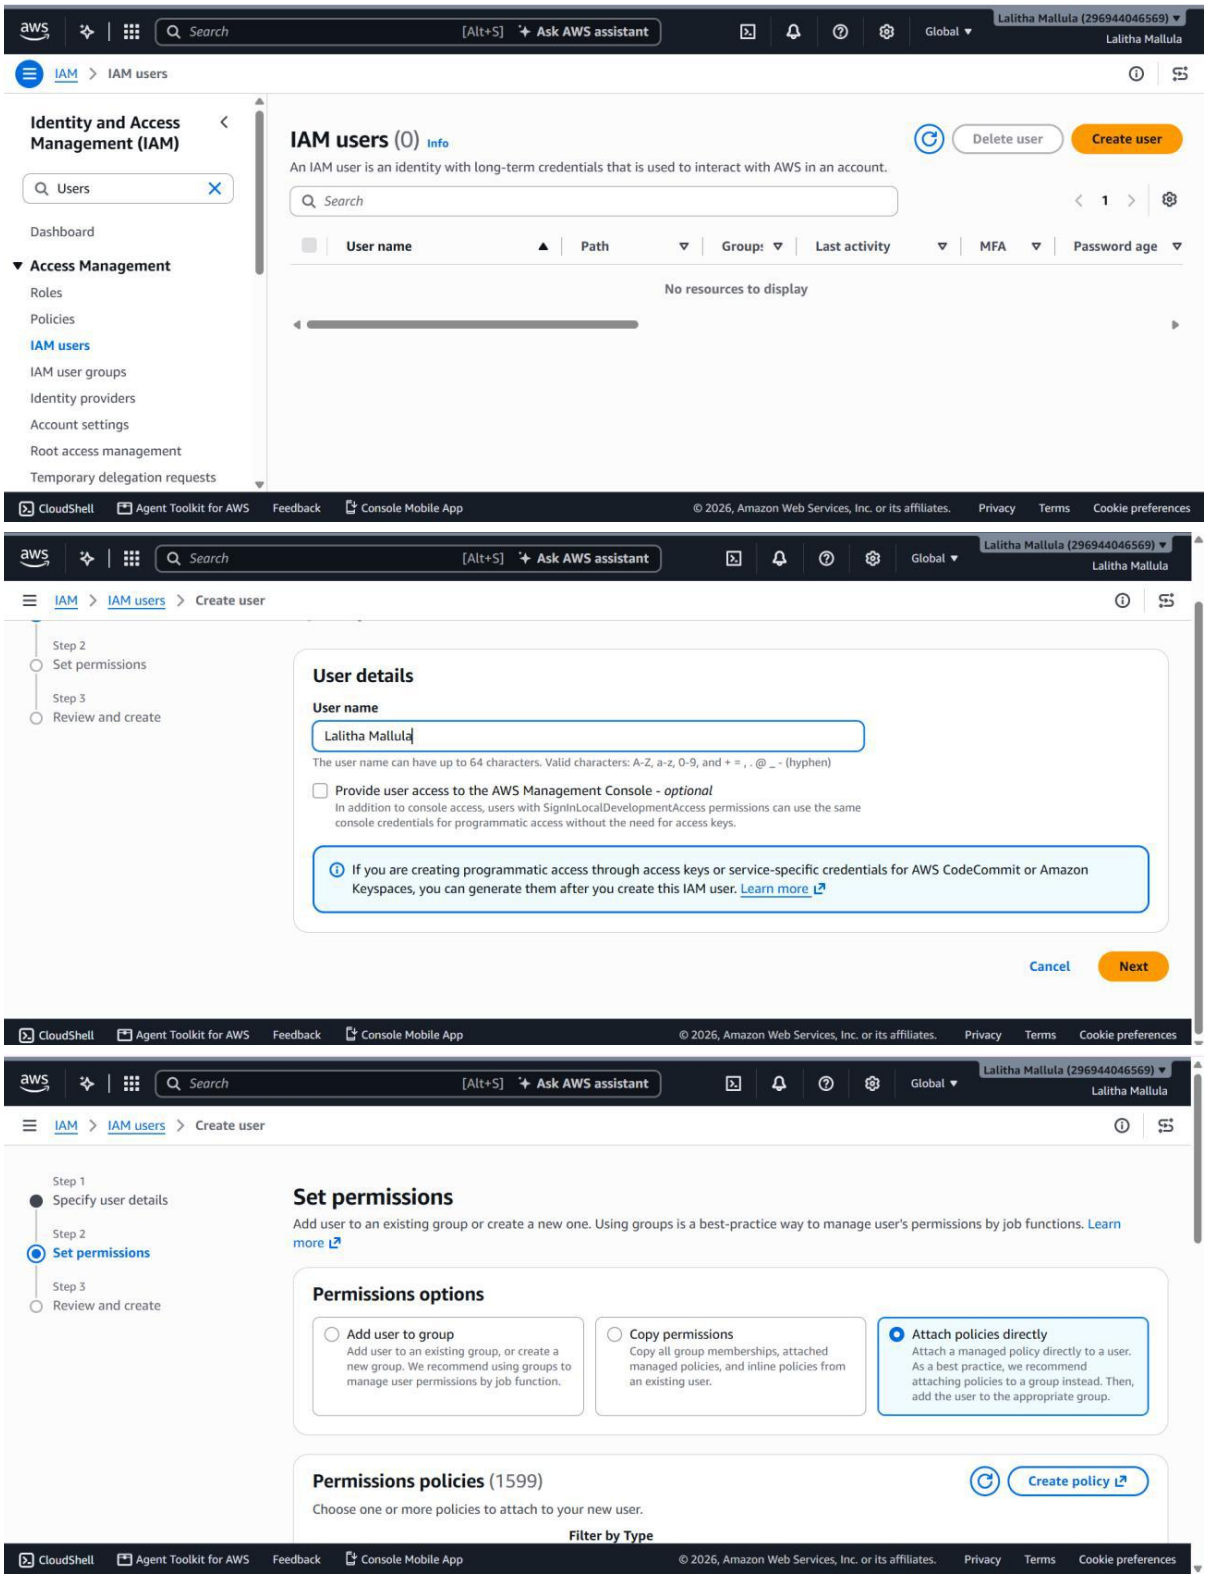

Procedure

1. Open the IAM service

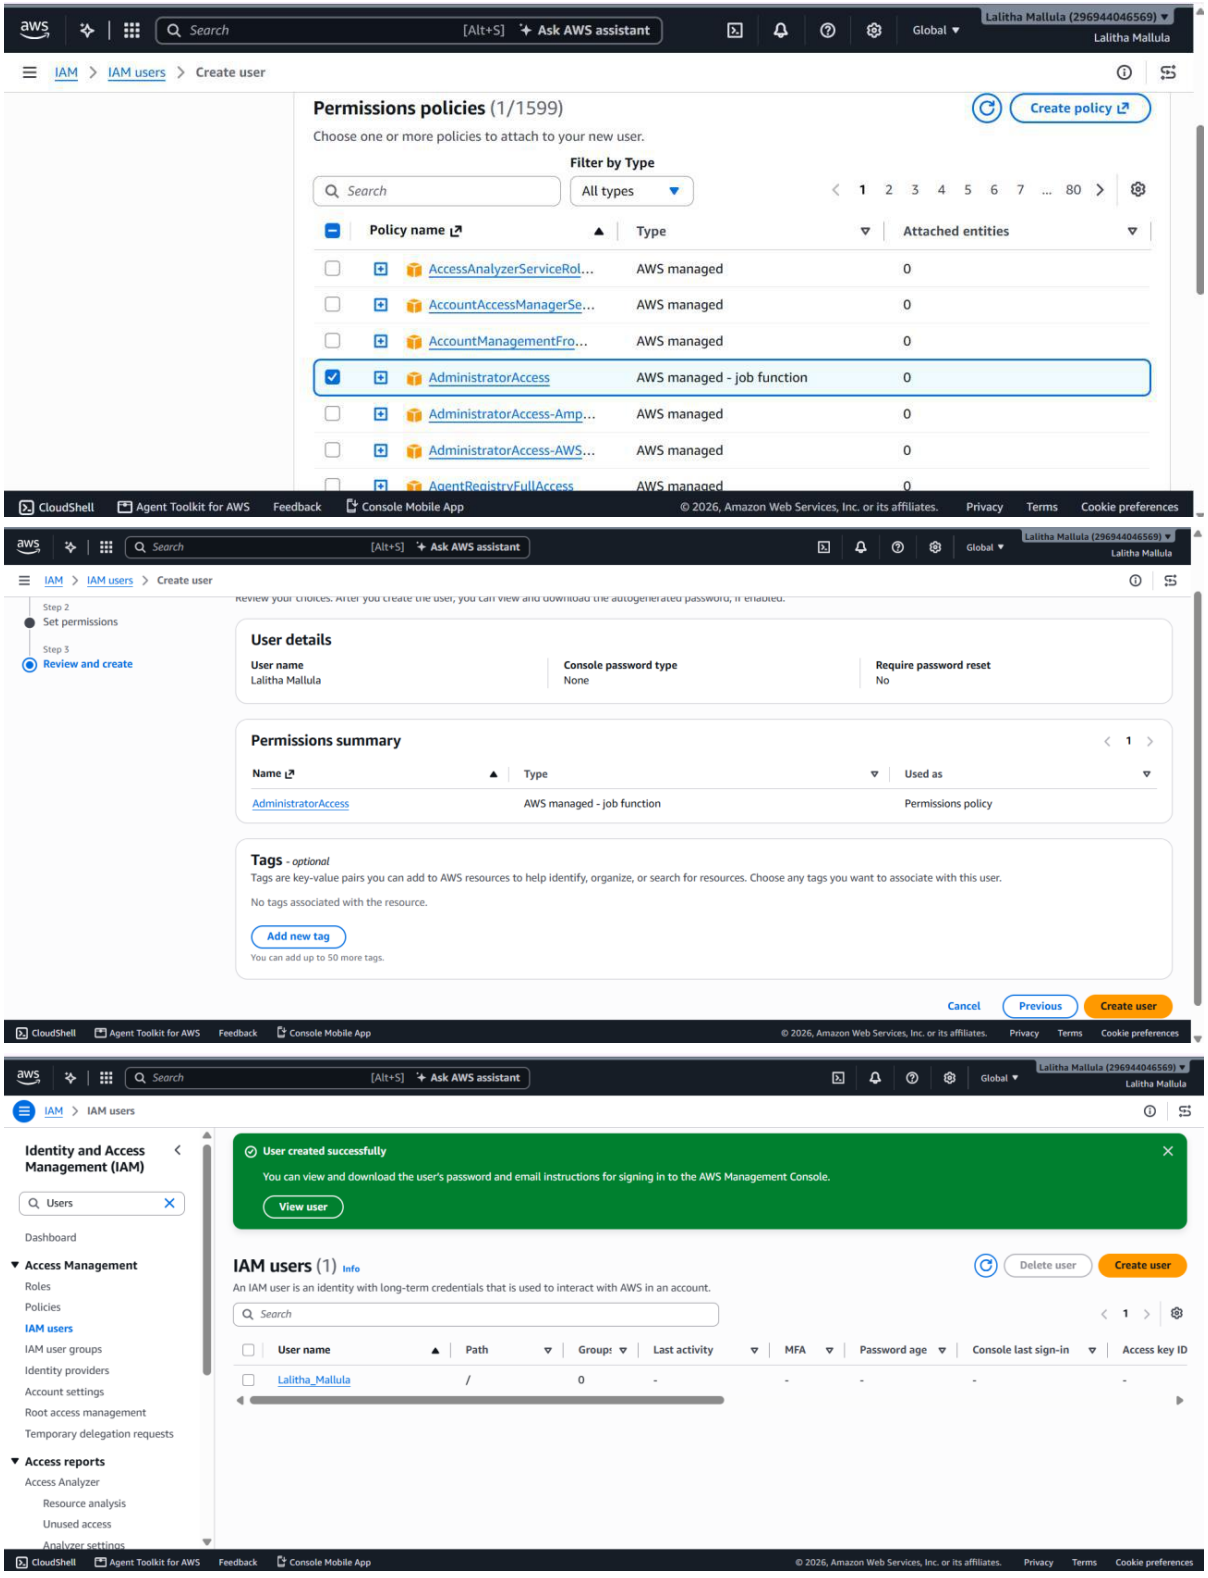

1. Open the AWS Management Console and sign in using an account that has permission to manage IAM users.
2. In the console search bar, type IAM and select IAM from the search results.
3. When the IAM Dashboard opens, select IAM users from the left navigation pane.

2. Create a new IAM user

4. On the IAM users page, select Create user.
5. In the User details section, enter a user name for the new IAM user.
6. If console access is required, select the option to provide the user access to the AWS Management Console and configure the sign-in options as instructed.
7. Select Next to continue to the permissions step.

3. Assign permissions to the IAM user

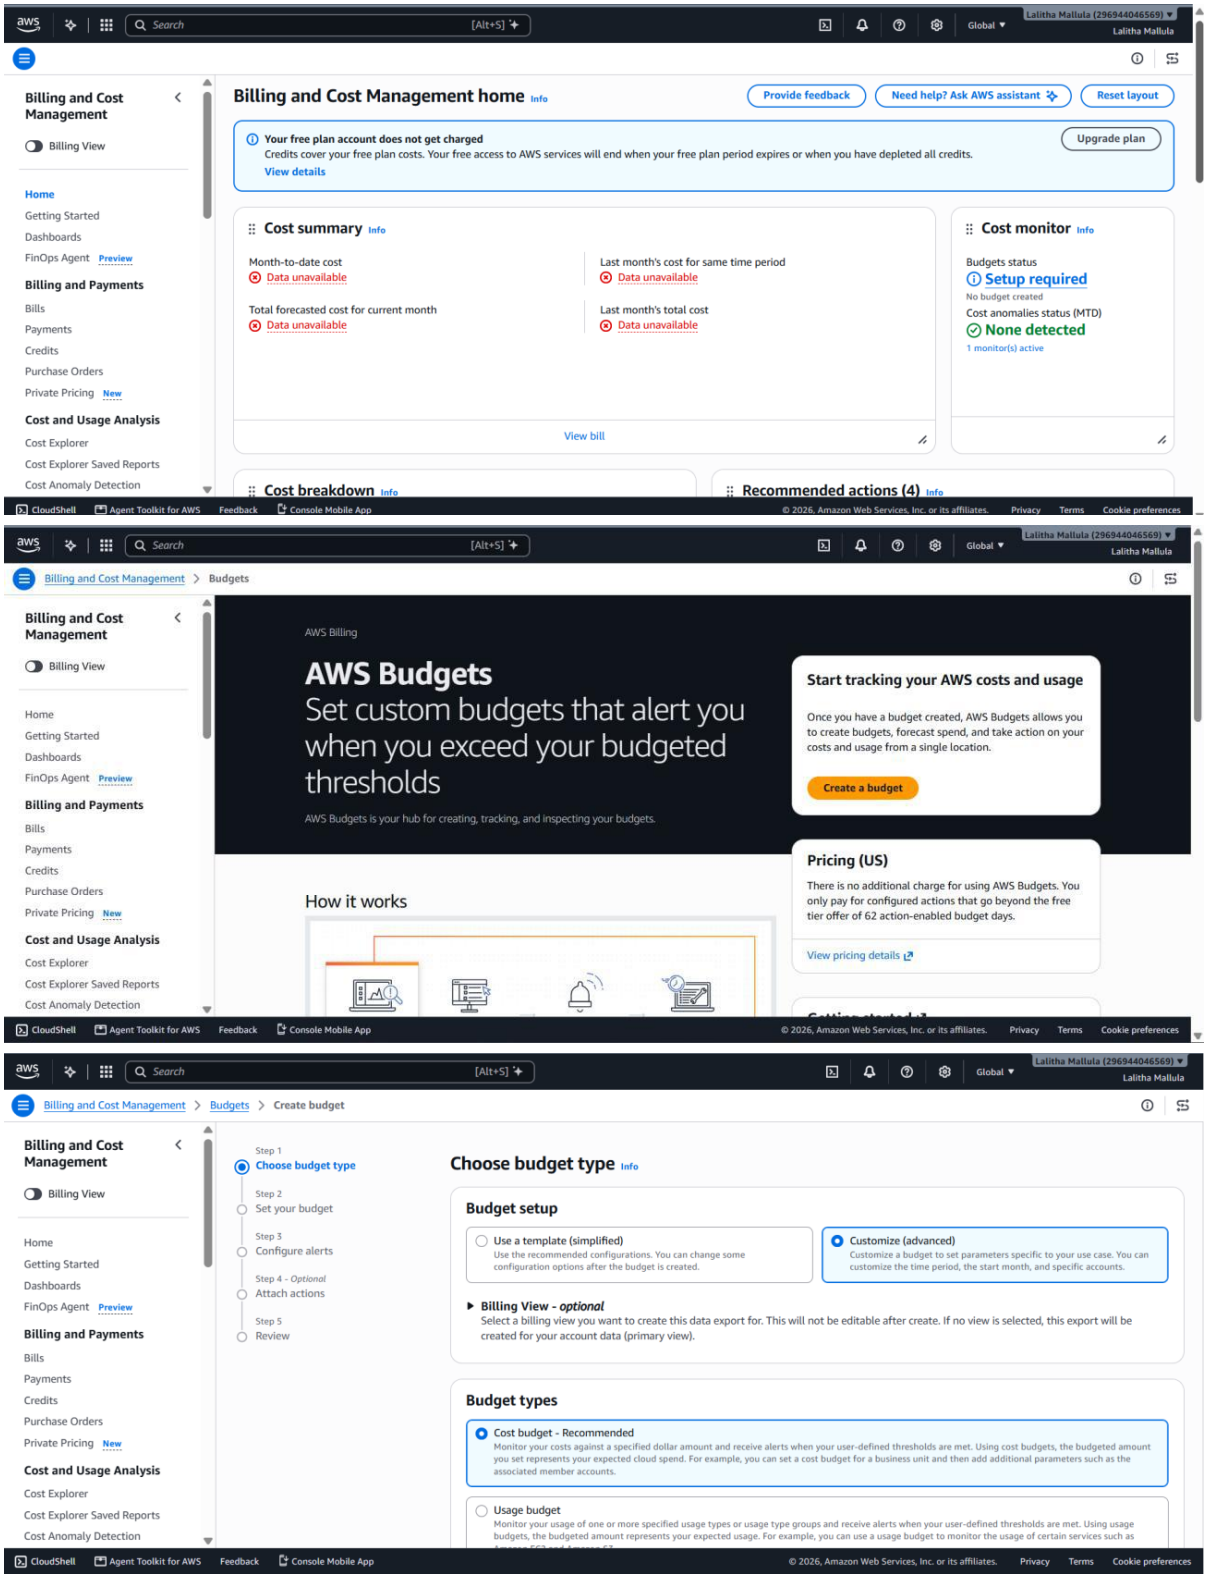

8. Under Permissions options, select Attach policies directly to attach an existing permissions policy.
9. Search for the required policy and select its checkbox. The supplied screenshot shows the AdministratorAccess policy selected.
10. Select Next to review the user details and permissions summary.
11. Check the details and select Create user.

4. Verify IAM user creation

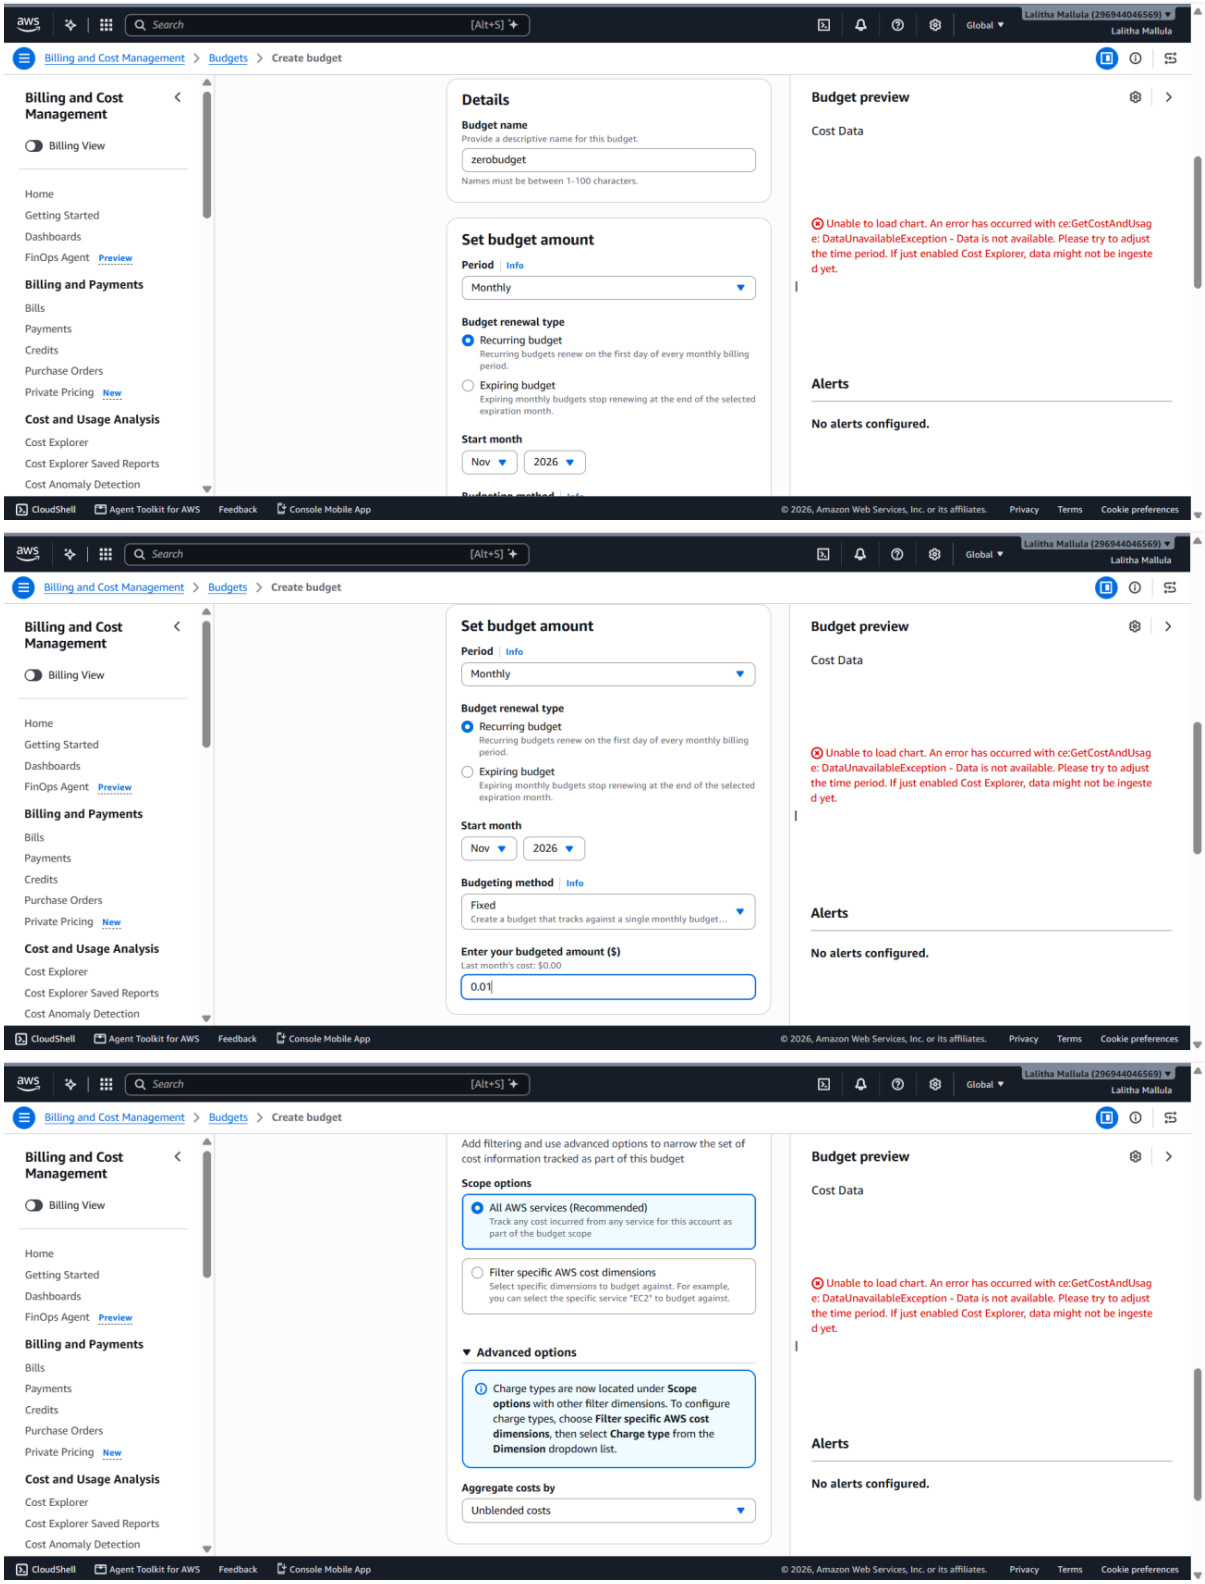

12. A success message appears after AWS creates the user.
13. Return to the IAM users list and verify that the newly created user is displayed.

5. Open AWS Budgets

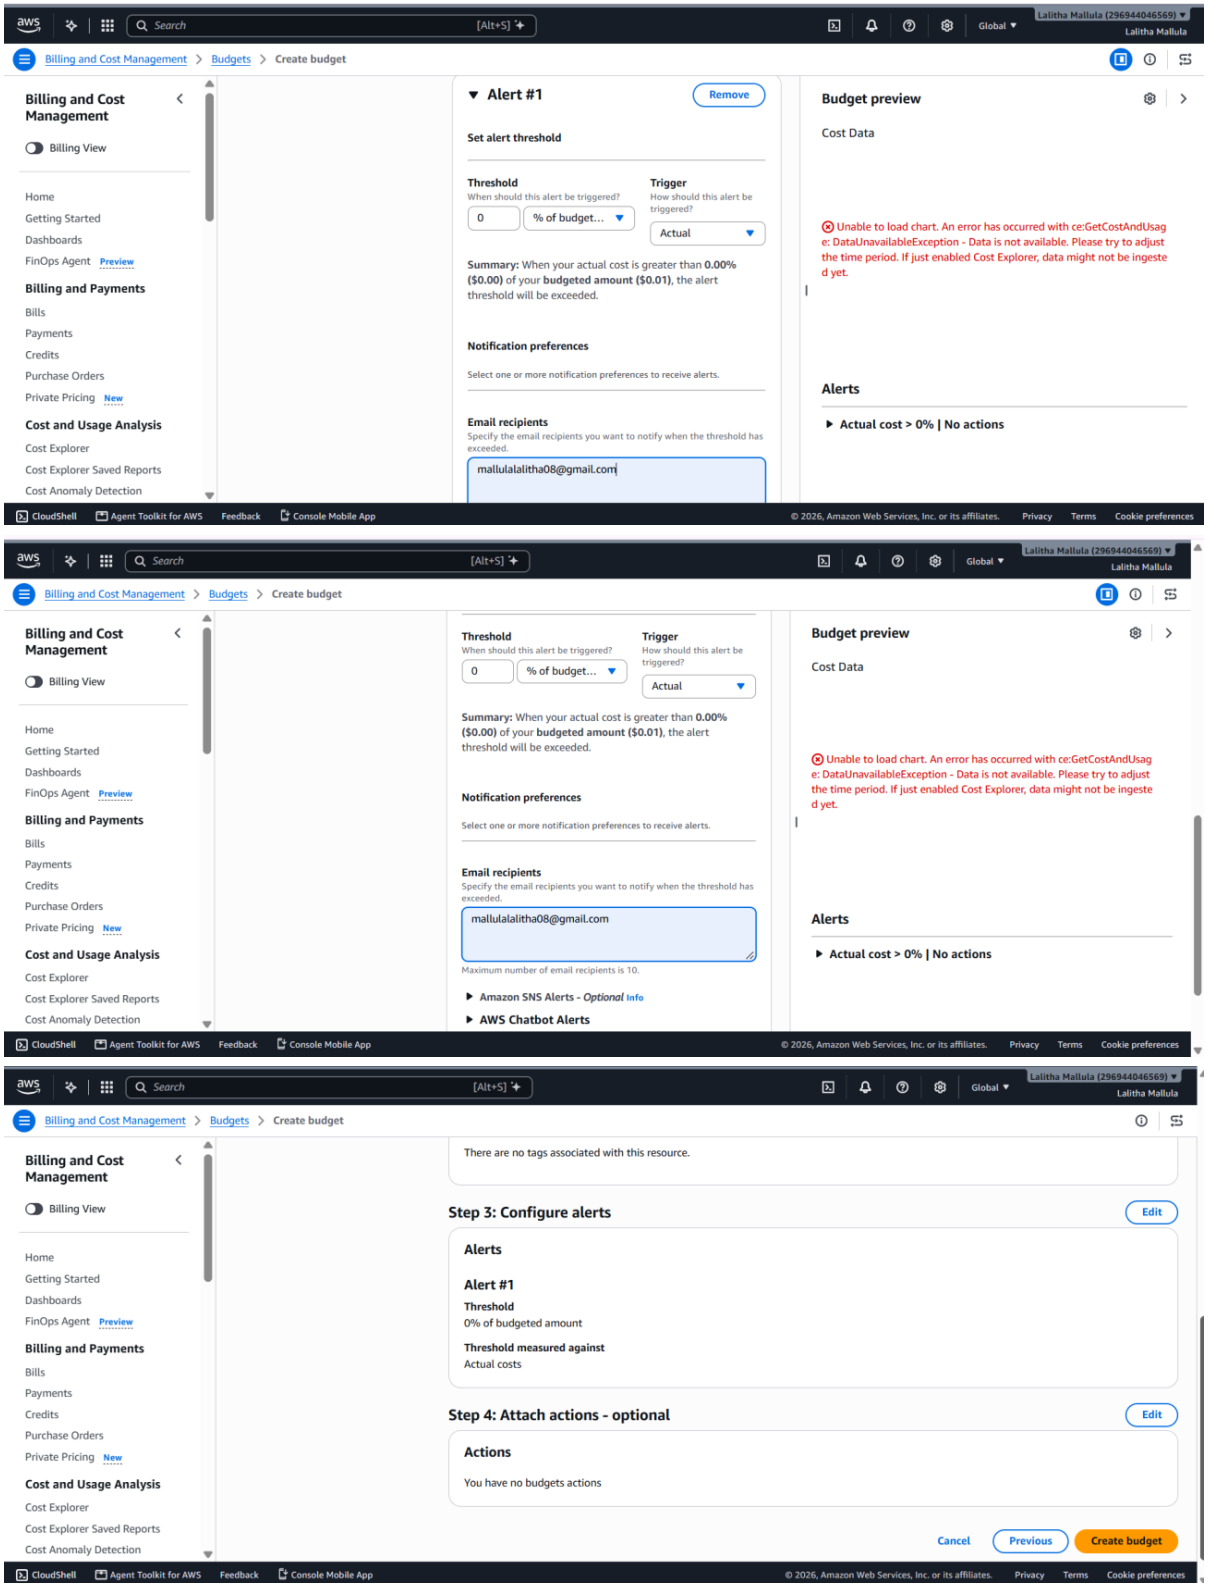

14. Open Billing and Cost Management in the AWS Management Console.
15. From the left navigation pane, select Budgets.
16. On the AWS Budgets page, select Create budget.

6. Choose the budget type

17. Under Budget setup, select Customize (advanced).
18. Under Budget types, select Cost budget – Recommended, as shown in the screenshot.
19. Continue to the budget details page.

7. Enter budget details and amount

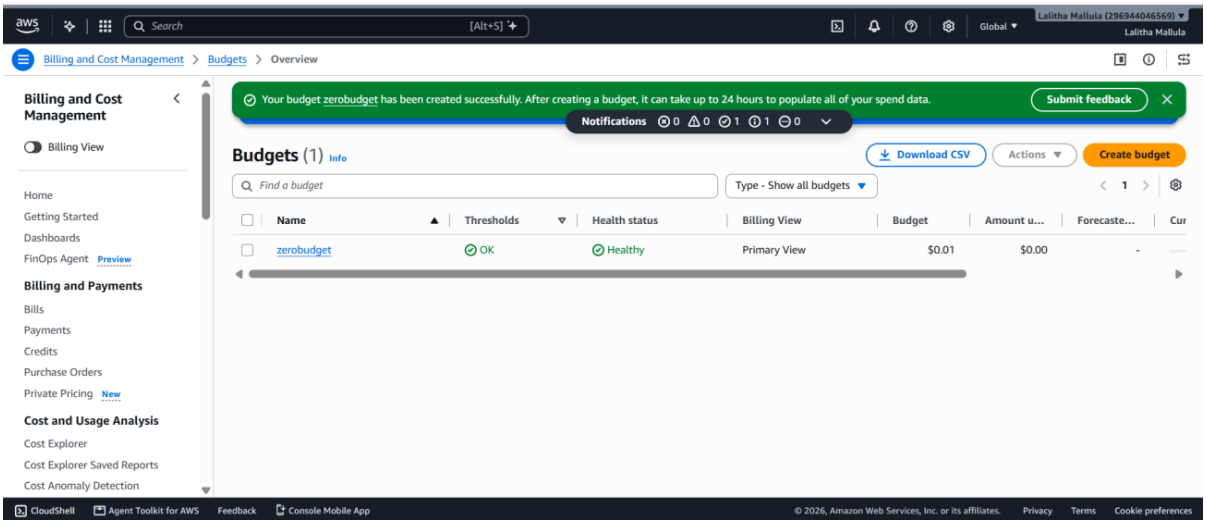

20. Enter a name in the Budget name field.
21. Choose the budget period, such as Monthly.
22. Choose the budget renewal type. The screenshot shows Recurring budget.
23. Select the start month and year.
24. Choose the budgeting method and enter the budgeted amount.
25. Under Scope options, keep All AWS services selected if the budget should cover all AWS services.

8. Configure budget alerts

26. In the Alerts section, add an alert threshold as a percentage of the budget amount.
27. Choose whether the alert is based on Actual or Forecasted spending, as required.
28. Enter the email address that should receive the alert notification.
29. Review the alert settings and continue to the review step.

9. Review and create the budget

30. Review the budget configuration, including the budget amount, scope, and alert details.
31. Select Create budget to complete the setup.
32. A confirmation message appears when the budget is created successfully.
33. Open the Budgets overview and verify that the new budget appears in the list.

Result

The IAM user was created successfully with the selected permissions policy. The additional AWS Budgets procedure documents the budget creation workflow shown in the supplied screenshots.

Important Note: AdministratorAccess grants extensive permissions. Use it only when specifically required for the practical; otherwise, follow the principle of least privilege. Use your own AWS account details and do not copy personal information visible in sample screenshots.
